Foreign Exchange

The US dollar was bullish against all of its major pairs except for the GBP and EUR on Tuesday. On the economic data front, the NFIB Small Business Optimism index beat estimates reaching 105 in May (estimated 102) compared with 103.5 in the previous month. PPI Final Demand decelerated slightly by 0.1% in May and in-line with estimates vs. 0.2% in April. Next, PPI Final Demand grew 1.8% YoY for May (estimated 2%) compared to 2.2% in May of 2018.

The Euro was bullish against all of its major pairs with the exception of the GBP. In Europe, the UK ILO unemployment rate was flat at 3.8% in April, as expected.

The Australian dollar was bearish against all of its major pairs except for the GBP and EUR.

Gold spot Intraday: rebound in sight.

Pivot: 1323.00

Our preference: long positions above 1323.00 with targets at 1330.00 & 1333.50 in extension.

Alternative scenario: below 1323.00 look for further downside with 1320.00 & 1316.00 as targets.

Comment: the RSI calls for a rebound.

Green Lines Represent Resistances | Red Lines Represent Support Levels | Light Blue is a Pivot Point | Black represents the price when the report was produced

EUR/USD Intraday: bullish bias above 1.1310.

Pivot: 1.1310

Our preference: long positions above 1.1310 with targets at 1.1345 & 1.1360 in extension.

Alternative scenario: below 1.1310 look for further downside with 1.1300 & 1.1290 as targets.

Comment: the RSI lacks downward momentum.

Green Lines Represent Resistances | Red Lines Represent Support Levels | Light Blue is a Pivot Point | Black represents the price when the report was produced

GBP/USD Intraday: the upside prevails.

Pivot: 1.2705

Our preference: long positions above 1.2705 with targets at 1.2735 & 1.2760 in extension.

Alternative scenario: below 1.2705 look for further downside with 1.2690 & 1.2670 as targets.

Comment: technically the RSI is above its neutrality area at 50.

Green Lines Represent Resistances | Red Lines Represent Support Levels | Light Blue is a Pivot Point | Black represents the price when the report was produced

USD/JPY Intraday: under pressure.

Pivot: 108.65

Our preference: short positions below 108.65 with targets at 108.40 & 108.15 in extension.

Alternative scenario: above 108.65 look for further upside with 108.80 & 109.00 as targets.

Comment: as long as the resistance at 108.65 is not surpassed, the risk of the break below 108.40 remains high.

Green Lines Represent Resistances | Red Lines Represent Support Levels | Light Blue is a Pivot Point | Black represents the price when the report was produced

AUD/USD Intraday: key resistance at 0.6970.

Pivot: 0.6970

Our preference: short positions below 0.6970 with targets at 0.6950 & 0.6935 in extension.

Alternative scenario: above 0.6970 look for further upside with 0.6980 & 0.6990 as targets.

Comment: as long as 0.6970 is resistance, likely decline to 0.6950.

Green Lines Represent Resistances | Red Lines Represent Support Levels | Light Blue is a Pivot Point | Black represents the price when the report was produced

USD/CAD Intraday: bullish bias above 1.3265.

Pivot: 1.3265

Our preference: long positions above 1.3265 with targets at 1.3295 & 1.3310 in extension.

Alternative scenario: below 1.3265 look for further downside with 1.3245 & 1.3230 as targets.

Comment: a support base at 1.3265 has formed and has allowed for a temporary stabilisation.

Green Lines Represent Resistances | Red Lines Represent Support Levels | Light Blue is a Pivot Point | Black represents the price when the report was produced

USD/SGD Intraday: under pressure.

Pivot: 1.3645

Our preference: short positions below 1.3645 with targets at 1.3625 & 1.3610 in extension.

Alternative scenario: above 1.3645 look for further upside with 1.3655 & 1.3665 as targets.

Comment: the break below 1.3645 is a negative signal that has opened a path to 1.3625.

MA (50) & MA (20): The most simple trend indicators are Moving Averages. They simply correspond to an average calculated on an evolving time scale (20 and 50 periods): every day, the oldest value (often taken at the close) in the average calculus is replaced by the value of the new session.

Bollinger bands: are represented by 3 different bands and are derived from moving averages. The middle band corresponds to a simple moving average (MA (20)). The level of the upper band, in every point, corresponds to the sum of the level of the middle band and twice the value of the standard deviation associated to the 20-day moving average. Reciprocally, the level of the lower band corresponds to the level of the middle band diminished by twice the value of the standard deviation associated to the 20-day moving average. An envelop of the stock price is thus determined. This makes it possible to then identify the variation margin in which the stock should stay almost systematically. In the case of a stock following a Gauss law, 95 % of the trades will thus occur between these bands.

RSI (14): the Relative Strength Index aims at establishing a reference scale independently from the stock prices levels themselves. As the RSI has boundaries (0 and 100), it then becomes very easy to determine overbought (above 70) and oversold (below 30) areas. In addition, just as on prices themselves, supports and resistances can appear, especially when nearing the neutrality zone (near 50). Thus, the RSI is one of the most commonly used counter-trend indicators.

It is based on the average of rises and drops of price, with the formula:

$$RSI = 100 - [100 / (1 + RS)]$$

Where RS represents the average of up closes divided by the average of down closes on the considered period (14).
